

🟩 = Excellent

🟨 = Acceptable

The image is brilliant from edge to edge, but the central rangefinder, microprism or cross-hair area is dim. Focus on the surrounding matte area.

🟥 = Acceptable

Slight vignetting or moire phenomenon (in the case of the microprism) affects the screen image. But the image on film shows no traces of this.

🟥 = Acceptable

Incompatible with any lens having a maximum aperture larger than f/2.8 since this decreases the efficiency and accuracy of the screen rangefinder. The in-focus image in the central spot may prove to be slightly out of focus on film. Focus on the surrounding matte area.

**Caution:** The rear surface of the screen is made of acryl resin. Special care should be taken to protect it from scratching or excessive pressure.
